Windows Logon Types

Logon title	Description
Interactive	A user logged on to this computer.
Network	A user or computer logged on to this computer from the network.
Batch	Batch logon type is used by batch servers, where processes may be executing on behalf of a user without their direct intervention.
Service	A service was started by the Service Control Manager.
Unlock	This workstation was unlocked.
NetworkCleartext	A user logged on to this computer from the network. The user's password was passed to the authentication package in its unhashed form. The built-in authentication packages all hash credentials before sending them across the network. The credentials do not traverse the network in plaintext (also called cleartext).
NewCredentials	A caller cloned its current token and specified new credentials for outbound connections. The new logon session has the same local identity, but uses different credentials for other network connections.
RemoteInteractive	A user logged on to this computer remotely using Terminal Services or Remote Desktop.
CachedInteractive	A user logged on to this computer with network credentials that were stored locally on the computer. The domain controller was not contacted to verify the credentials.

Task Directory

Windows SKU

Item	Meaning
Yes	Feature is present in the given edition
Yes, since [update]	Feature is present in the given edition after installing a certain update
No	Feature is absent from the given edition
No, since [update]	Feature is absent from the given edition after installing a certain update (It might have been fully or partly present prior to that update)
[Explanation]	Feature is partly present in the given edition
[Explanation], since [update]	Feature is partly present in the given edition, after installing a certain update (It might have been fully present prior to that update, or not present at all)

Comparison of Windows 10 editions[52][53][54][55]

Features	Home Single Language	Home	Pro	Pro (Education)	Education	Pro for Workstations	Enterprise
